genetically engineered mouse models for cancer research have become invaluable tools for studying cancer biology and evaluating novel therapeutic approaches this volume focuses on state of the art methods for generating analyzing and validating such models for studying aspects of human cancer biology additionally these models are emerging as important pre clinical systems in which to test cancer prevention and therapeutic strategies in order to select compounds for testing in clinical trials

new insights into the molecular biology of childhood leukemias have stimulated numerous advances in diagnostic methods strategies for risk assessment and the development of novel therapy for genetic subtypes of the diseases fully revised and updated this new edition of childhood leukemias provides the most comprehensive clinically oriented and authoritative reference dedicated to these diseases beginning with an overview of history cell biology and pathology subsequent chapters review approaches in the evaluation and management of specific leukemias new therapeutic development and the unique pharmacodynamics and pharmacogenetics of individual patients new chapters include epigenetics of leukemias leukemias in patients with down syndrome and leukemia in adolescents and young adults the final section covers the complications associated with the disease or its treatment and supportive care during and after treatment authored by leading experts this is a must have for any physician or investigator who deals with leukemias in childhood

this volume provides a state of the art report on the modelling of aqueous solid solution systems by the combined use of chemical thermodynamics and experimental and computational techniques these systems are ubiquitous in nature and therefore intrinsic to the understanding and quantification of radionuclide containment and retardation processes present in geological repositories of radioactive waste the various approaches are illustrated with case studies from the literature

acute myelogenous leukemia is a timely compilation of new concepts in the molecular pathogenesis and molecular therapy of acute myelogenous leukemia aml the focus is on selected critical molecular determinants of aml pathogenesis and pathophysiology and the exploitation of these factors by diverse therapeutic agents and modalities bringing together new concepts and findings in the basic and clinical science of aml the book emphasizes the molecular basis for new therapies that

stand to have the greatest potential impact on the clinical face of these diseases the text provides insights into selected novel strategies currently and prospectively being developed including interruption of specific signal transduction pathways modulation of gene expression attempts to reinstate differentiation and immunomodulation there is an emphasis throughout on the bidirectional flow of knowledge between the clinical and laboratory arenas and both basic and clinical scientists will benefit from this translational text

contains more than 25 000 titles of books recommended for children in grades k 6
